A 3-Day Course on Taguchi Method for Process and Product Optimization

**28Feb- 1Mar 2012
UNIMAP, Perlis, Malaysia**

CONTENTS

1. Taguchi Method Overview
2. Properties of Orthogonal Arrays (OA)
3. Matrix Experiments and Additive Model
4. ‘Static Problems’ – no signal input
5. ‘Dynamic Problems – with signal
6. EDM case-study with ‘full’ Calculations
7. Three ‘static’ case-studies – EDM, Polysi and Schmitt Trigger
8. ‘Dynamic’ Case-study – NC Machine
9. ‘Dynamic’ Case-study – CFRP molding
10. ‘Dynamic’ Case-study – Vulc-rubber
11. Excel-sheet for EDM – for EW%
12. Excel-sheet for EDM – for MRR
13. List of Case-studies in packaging
14. List of Problems in manufacturing
15. List of Problems in microelectronics
